

SPRAY TAN

preparation

GUIDELINES

WAX + SHAVE

Waxing should be completed at least 48 hours prior to your appointment and shaving should be completed with a razor that lacks a moisture strip.

CLOTHING

Wear dark, loose-fitting clothing with open-toed sandals. Please note that the bronzer in solution may transfer to your items, but is water soluble and should wash out.

EXFOLIATE

Stray away from a body scrub/loofah combo as most are oil-based and will leave a residue. Instead, use an exfoliating mitt.

MANI + PEDI

Complete manicures + pedicures the day prior. If completed day-of tan, please forego any oils/lotions that your nail technician might apply on you. If completed days after tan, your tan may become uneven due to soaking, acetone, oils, lotions, etc.

SPA TREATMENTS

Tanning should always be the last beauty treatment completed due to the barriers that spa treatment products can create. Complete all facials, and massages the day prior.

SHOWERING

Any bar soaps/cream-based body washes (Dove specifically) are known to leave a residue on the skin and can create a barrier that the tan cannot penetrate through and may leave streaks. Any gel-based body wash is best. Showering should be completed at least four hours prior to tanning to allow your pH levels to neutralize. If you must shower within four hours, run cold water at the end of your shower.

NO BARRIERS

Forego any lotions, oils, deodorant, perfumes, or makeup the day of your appointment. All of these can create a barrier on the skin that the tan will not adhere to.
